Appendix B:Reports Per Individual School System p. 19

Glossary

1. Acid reflux disease-a burning discomfort behind the lower part of the sternum usually related to spasm of the lower end of the esophagus or of the upper part of the stomach.
2. Aortic regurgitation-leakage of blood from the aorta back into the left ventricle due to failure of an aortic valve to close properly.
3. Aortic valvular stenosis-condition in which the aorta is abnormally narrow.
4. Asperger's Syndrome-a developmental disorder characterized by impaired social and occupational skills, normal language and cognitive development, and restricted, repetitive, and stereotyped patterns of behavior, interests, and activities; may have above average performance in one area.
5. Attention deficit disorder-syndrome of disordered learning and disruptive behavior that has several subtypes characterized primarily by symptoms of inattentiveness and/or hyperactivity and impulsive behavior.
6. Attention deficit and hyperactivity disorder-see attention deficit disorder.
7. Automatic external defibrillator-an electronic device used to defibrillate a heart by applying an electric shock to it.
8. Asthma-a chronic lung disorder that is marked by recurring episodes of airway obstruction manifested by labored breathing accompanied especially by wheezing and coughing and by a sense of constriction in the chest, and that is triggered by hyperreactivity to various stimuli.
9. Autism-a developmental disorder that appears by age three and that is recognized and diagnosed by impairment of the ability to form normal social relationships, impairment of the ability to communicate with others, and by stereotyped behavior patterns.
10. Benadryl- antihistamine drug used to relieve or prevent the symptoms of allergy.
11. Bronchiectasis-a chronic inflammatory or degenerative condition of one or more bronchi of the lungs.
12. Celiac disease-a chronic hereditary intestinal disorder in which an inability to absorb gluten results in the triggering of an immune response that damages the intestinal mucosa.
13. Cerebral palsy-a disability resulting from damage to the brain before, during, or

shortly after birth; manifested by muscular incoordination and speech disturbances.

14. Coarctation of aorta-localized narrowing of the large artery called the aorta.

15. Colostomy-surgical formation of an artificial anus by connecting the colon to an opening in the abdominal wall.

16. CRNP-certified registered nurse practitioner.

17. Dandy Walker Syndrome- congenital brain malformation involving the area at the back of the brain that controls movement and the fluid filled spaces around it. Symptoms, which often occur in early infancy, include slow motor development and progressive enlargement of the skull.

18. Diabetes- a disorder of carbohydrate metabolism caused by a combination of hereditary and environmental factors; usually characterized by inadequate secretion or utilization of insulin, excessive urine production, excessive amounts of sugar in the blood and urine, and by thirst, hunger, and weight loss.

19. Diastat- medication that may be used to treat seizures as well as other conditions.

20. Down Syndrome- a congenital condition characterized by moderate to severe mental retardation, slanting eyes, a broad short skull, broad hands with short fingers, and by a defect in the human chromosome numbered 21.

21. Ehlers Danlos Syndrome- group of inherited connective tissue disorders, characterized by a defect in their connective tissue, the tissue that provides support to many body parts such as the skin, muscles and ligaments.

22. Encopresis- involuntary passage of feces.

23. Epinephrine- used medicinally especially as a heart stimulant, to treat open-angle glaucoma and life-threatening allergic reactions, to prolong the effects of local anesthetics, and as a bronchodilator.

24. Fragile X Syndrome- an inherited disorder characterized by moderate to severe mental retardation, by large ears, chin, and forehead, and by enlarged testes in males.

25. Gastric tube- medical device inserted through a small incision in the abdomen into the stomach; used to provide nutrition to patients who cannot obtain nutrition by swallowing.

26. Gastroesophageal reflux disease- chronic condition that is characterized by periodic episodes of gastroesophageal reflux usually accompanied by heartburn. See acid reflux.
27. Glucagon- hormone that promotes an increase in the sugar content of the blood.
28. Glucose monitoring- measures the amount of glucose in the blood right at the time of sample collection.
29. Hemangioma- a usually benign tumor made up of blood vessels that typically occurs as a purplish or reddish slightly elevated area of skin.
30. Hemophilia- hereditary blood defect that occurs almost exclusively in males and is characterized by delayed clotting of the blood and consequent difficulty in controlling hemorrhage even after minor injuries.
31. Hickman catheter- an indwelling central venous line which provides direct access to the heart.
32. Hirschsprung's disease- extremely enlarged colon leading to prolonged constipation.
33. Hodgkin's lymphoma- form of cancer characterized by progressive enlargement of lymph nodes, spleen, and liver and by progressive anemia.
34. Hydrocephaly- an abnormal increase in the amount of cerebrospinal fluid within the cranial cavity accompanied by enlargement of the skull and especially the forehead, and atrophy of the brain.
35. Hypoglycemia- abnormal decrease of sugar in the blood.
36. Hypothyroidism- deficient activity of the thyroid gland.
37. Imitrex-injectable medication used to treat migraine headaches.
38. Inhaler- a device designed to deliver medication via inhalation.
39. Irritable bowel syndrome- a chronic disorder of the colon characterized by diarrhea and/or constipation, abdominal pain and bloating, and passage of mucus in the stool.
40. Juvenile rheumatoid arthritis- autoimmune disease characterized by pain, stiffness, inflammation, swelling, and sometimes destruction of joints.
41. Long QT syndrome- hereditary disorder of the heart's electrical rhythm usually affecting children or young adults.

42. Marfans Syndrome- a disorder of connective tissue that is characterized by abnormal elongation of the long bones and often by ocular and circulatory defects.
43. Microcephaly- a condition of abnormal smallness of the head usually associated with mental retardation.
44. Nebulizer- an atomizer equipped to produce an extremely fine spray of medication for deep penetration of the lungs.
45. Neoplasm of the brain-tumor of the brain which could be either cancerous or benign.
46. Neurogenic bladder- condition in which the nerves that carry messages from the brain to the muscles of the bladder telling them either to tighten or release do not function properly.
47. Pancrease- medication used to help digestion in certain conditions in which the pancreas is not working properly.
48. Paraplegia- paralysis of the lower half of the body.
49. Pepcid- medicine used to treat ulcers, heartburn, and sour stomach.
50. Perisylvian Syndrome- extremely rare neurological disorder characterized by partial paralysis of muscles on both sides of the face, tongue, jaws, and throat, difficulties in speaking, chewing and swallowing and/or seizures; mild to severe mental retardation is also usually present.
51. Periventricular leucomalacia- premature baby's brain that has suffered damage from lack of blood and oxygen; can lead to visual impairment.
52. Polymiositis- inflammation of the muscle fibers resulting in severe weakness.
53. Prednisone- medicine that works to treat patients with low levels of corticosteroids by replacing steroids that are normally produced naturally by the body; treats other conditions by reducing swelling and redness and by changing the way the immune system works.
54. Pulmonary stenosis- abnormal narrowing of blood vessels between the pulmonary artery and the right ventricle.
55. Recombinant Factor- agent that helps the blood form clots to stop bleeding and is given in intravenous (IV) medication.
56. Renal reflux- the backup of urine from the bladder into the tube that carries urine from the kidney to the bladder (ureter) during urination.

57. Scoliosis- a lateral curvature of the spine.
58. Seizure- convulsions, sensory disturbances, or loss of consciousness resulting from abnormal electrical discharges in the brain.
59. Short bowel syndrome- malabsorption from the small intestine that is marked by diarrhea and malnutrition.
60. Solu-Cortef- medication that may be used to treat bladder problems such as frequent need to urinate or loss of control of urinary function as well as other conditions.
61. Soto's Syndrome- rare genetic disorder characterized by excessive physical growth during the first 2 to 3 years of life; may be accompanied by mild mental retardation, delayed motor, cognitive, and social development, hypotonia (low muscle tone), and speech impairments.
62. Spastic quadriplegia-stiffening or contractures of the arms and legs.
63. Spina bifida- defect marked by congenital opening of the spinal column.
64. Subglottic stenosis- narrowing of the subglottic airway.
65. Tourette's Syndrome- neuropsychiatric disorder that is characterized by multiple recurrent involuntary tics involving body movements and vocalizations that often has one or more associated behavioral or psychiatric conditions disorders.
66. Tricuspid atresia- occurs when a child is born without a tricuspid heart valve; prevents blood from flowing from the right atrium of the heart to the right ventricle.
67. Tracheostomy- the surgical formation of an opening into the trachea through the neck especially to allow the passage of air.
68. Urinary catheterization- insertion of a catheter into a patient's bladder in order to drain urine from the bladder into an attached bag or container.
69. Urticaria- raised edematous red patch of skin or mucous membrane; hives.
70. Valvular septal defect- form of congenital heart disease affecting the heart valves and wall.
71. Vagal nerve stimulator- device implanted in the brain in an attempt to decrease seizure activity.
72. Ventilator-a device for maintaining breathing.

73. Von Willebrand's disease- a genetic disorder characterized by mucosal and petechial bleeding due to abnormal blood vessels.

(Merriam-Webster Incorporated, 2003)

State of Children's Health in Alabama's Public School Systems

Background

Over one hundred years ago, Lillian Wald became not only the founder of Public Health Nursing but also of School Nursing when she persuaded the New York City Board of Education to place one of her nurses in four public schools for one month at no cost to the city. She was determined to demonstrate that having a nurse in schools would reduce student absenteeism caused by communicable disease. Lina Rogers Struthers, the first school nurse, proved so successful that at the end of the designated month, the Board of Education opted to hire twelve more nurses. Within one year school absenteeism lessened 90% (Kennedy, 2003). By 1908 Wald, ever the enthusiastic reformer, succeeded in successfully lobbying for a regular system of school lunch for all children in the public school system as well as the establishment of the first Department of Special Education (Jewish Women's Archive, May 31, 2006).

Through the years, school nurses dealt with students' health needs across the Great Depression years, major wars and various societal transitions. Today, however, health services provided in public school settings have changed in order to accommodate laws that have placed a new population of special students with health care problems in the classroom. Further, school nurses are confronted to meet increasing needs for diagnostics and treatments related to chronic diseases and acute medical conditions. School nurses face new challenges never even considered by the first nurse sent out from the Henry Street Settlement House (Faist, 2004).

Wolfe and Selekman (2002) noted that the role of the school nurse has expanded to include not only care of the student with an acute condition but also chronic conditions. It is estimated that at least 10-15% of school age children have a chronic condition that will likely require treatment in the school setting. Today's school nurse must also be prepared to care for students who now have a much greater incidence of diagnosed psychiatric disorders. These can include attention deficit hyperactivity disorder (ADHD), childhood depression, and anxiety disorders, as well as bipolar disorder and other serious conditions.

In order to meet the healthcare needs of children in the public school setting, many states, including Alabama, allow delegation of procedures such as assistance with medication to unlicensed assistive personnel. The Alabama Board of Nursing (the Board) is held accountable for enforcing the regulations that allow for this action. The Board is also accountable for assuring that actions taken by the responsible licensed nurses are competent and safe. Rule 610-X-6-.06 of the Alabama Board of Nursing Administrative Code specifically addressed delegation by school nurses and stipulated that either the School Nurse Consultant for Alabama's public school systems or the School Nurse Administrator shall submit a report to the Board upon request.

Since implementation of the regulations in 2001, the Board requested two reports that addressed the student populations situation and the nursing care provided by licensed and supervised, unlicensed personnel. The initial school health services report was requested and compiled for academic year 2003-2004. A Monograph was printed and distributed to the State Department of Education, Governor Bob Riley, legislators, school superintendents, and interested organizations and individuals. This publication reflects the second report and covers Academic Year 2005-2006. Upon receipt of the results from each reporting school, results were coded and analyzed statistically using SPSS version 14.

Research Questions

Compilation of the data yielded a series of research questions to be answered upon statistical analysis. These questions included:

- What is the relationship between the number of Registered Nurses (RN) assigned to a specific school and the types of other health-related personnel available including Licensed Practical Nurses (LPN), volunteer nurses, Certified Registered Nurse Practitioners (CRNP), and substitute nurses?
- What is the relationship between the number of RNs assigned to a specific school and the physical condition of the student, which includes the presence of such conditions as diabetes, hemophilia, seizures, asthma, attention deficit disorder, and mental illness?
- What is the relationship between the number of RN assigned to a specific school and the physicians' orders documented for the various students?
- What is the relationship between the number of RNs assigned to a specific school and the types of procedures which are required to be performed in order to provide health care to the students?
- What is the relationship between the number of RNs assigned to a specific school and the types of injections which are ordered for the various students?
- What is the relationship between the number of RNs assigned to a specific school and the type of school, such as primary, intermediate, or high school?
- What is the relationship between the number of LPNs assigned to a specific school and the types of other health-related personnel available, including RNs, volunteer nurses, CRNPs, and substitute nurses?
- What is the relationship between the number of LPNs assigned to a specific school and the physical condition of the student, which includes the presence of such conditions as diabetes, hemophilia, seizures, asthma, attention deficit disorder, and mental illness?

- What is the relationship between the number of LPNs assigned to a specific school and the physicians' orders documented for the various students?
- What is the relationship between the number of LPNs assigned to a specific school and the types of procedures which are required to be performed in order to provide health care to the students?
- What is the relationship between the number of LPNs assigned to a specific school and the types of injections which are ordered for the various students?
- What is the relationship between the number of LPNs assigned to a specific school and the type of school, such as primary, secondary, or high school?

Participants

The sample consisted of 132 reporting school systems and 1449 reporting schools. Response rate was 100%, with registered nurses assigned to the schools being required to complete the report. Schools were coded as either primary, intermediate or senior high.

Instruments and Processes

Data for the report were compiled from a survey that was placed online on the Board's website for completion by a registered nurse assigned to each public school. Appendix A contains the survey tool. Questions were validated for content by Board members and staff as well as the State School Nurse Consultant in the State Department of Education. Initial responses from the survey prior to subjection to data analysis are included in Table 1 and Table 2. A code book was developed for tabulation of data.

Table 1

NURSES:

ITEM	TOTAL RESPONSES	COMMENTS
No. of Licensed Nurses Delegating to Unlicensed School Personnel Task of Assisting with Medications	1,748	Number includes both full-time and part-time RNs and LPNs
Full-time LPN s	428	
Full-time RNs	794	
Nurse Working Full-time within one Classroom of Students	86	
Nurse Providing Full-time One-on-One Care	57	
Full-time CRNPs	6	One CRNP stated that she was not being paid by her system as a CRNP
Health Career Teachers who are also Nurses	101	
Substitute Nurses	454	Chilton County currently has only one nurse to substitute for all schools
Volunteer Nurses	30	
No. of Unlicensed School Personnel Who have been Delegated the Task of Assisting with Medications	5,411	

**TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING
MEDICATIONS:**

Students with Orders for Breathing Treatments	711	
Students with Orders for Epi-Pens or other auto-injectable epinephrine	2,164	
Students with Orders for Glucagon	974	One student who required Glucagon has never had it supplied by his parents
Students with Orders to carry Inhalers on Person for Self-Administration	11,229	
Students with Orders for other Injectable Medications	4,317	These include steroids for a student with a heart transplant, allergy serum injections, Vitamin B-12, Imitrex, Recombinant Factor, Benadryl, and medication continuously infusing into a Hickman catheter
Students with Orders for Insulin	1,136	Injectable insulin
Students with Orders for Medications by Inhaler	8,004	
Students with Orders for Oral Medications to Treat ADD/ADHD	5,187	
Students with Orders for Oral Antibiotics	171	
Students with Orders for Oral Medications to Treat Psychiatric/Mental Illness	458	
Students with Orders for Oral Medications to Treat Asthma	2,742	
Students with Orders for Oral Medications to Treat Seizures	411	
Students with Orders for Other Oral Medications	28,549	These primarily consist of cough/cold medications, analgesics, eye drops, and allergy medications, as well as specific drugs such as Pepcid, Prednisone, and Pancrease
Students with Orders for Other Medications	711	Some nurses opted to include oral analgesics, eye drops, and over-the-counter remedies in this section

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Students with Orders for Blood Products	22	
No. of Students Requiring Gastric Tube feedings	337	Includes Replacement of Tube
No. of Students Requiring Glucose Monitoring	1,671	Fingerstick Blood Sugars
No. of Students Requiring Tracheostomy Care	55	Includes suctioning
No. of Students Requiring Urinary Catheterization	193	
No. of Students Requiring Ventilator Care	5	
Students Requiring Other Procedures	245	These consist of oxygen as needed, carbohydrate counting, colostomy care, nebulizer use, diaper changes, care of insulin pumps, use of vagal nerve stimulators as well as use of automatic external defibrillators

TOTAL NUMBER OF STUDENTS DIAGNOSED WITH THE FOLLOWING DISORDERS:

Students with ADD/ADHD	18,534	
Students with Asthma	35,721	
Students with Diabetes	1,919	Includes both Type I and Type II
Students with Hemophilia	117	
Students with Mental Illness	2,732	
Students with Seizure disorder	4,240	
Students with Other Disorders	63,266	

Table 2

COMMENTS OBTAINED FROM SCHOOL NURSE DATA-2006

PRACTICE	
TYPE OF SCHOOL	COMMENT
elementary	Hydrocephalic with shunt, hypertension, status-post coarctation of aorta repair, Tourette's Syndrome, hip and knee contractures, scoliosis with back brace
elementary	Autism, frontal lobe brain damage, Down's Syndrome, hypoglycemia, heart condition, hypothyroidism, neurogenic bladder, renal reflux, spinal bifida, spastic quadriplegia, microcephaly, Soto's Syndrome, neoplasm of brain, allergies to peanuts, ants, grass, mold; no way of knowing how many students have ADD/ADHD
elementary	Allergies to grass, insect bites, seafood, milk, peanuts; migraines, nosebleeds, kidney disease, clubfoot, sinus problems
elementary	Dandy Walker Syndrome, hemangioma, short bowel syndrome, cerebral palsy, migraines, glaucoma, Marfan's Syndrome, Down's Syndrome, microcephaly, autism, failure to thrive, Asperger's Syndrome
elementary	Encopresis, migraines, and paralyzed diaphragm
elementary	The information regarding number of children with mental illness is understated-parents do not always report this and the school officials are reluctant to share this private information.
elementary	RN filling LPN position. Conditions: Asperger's, autism, heart (no pacemaker), cerebral palsy with shunts, bronchiectasis, Tourette's Syndrome, scoliosis, celiac disease, autoimmune disease, subglottis stenosis, panic attacks, juvenile rheumatoid arthritis, Down's Syndrome, migraines, Hirschsprung's disease, irritable bowel syndrome
elementary	1 multi-handicapped student, 17 diagnosed with autism, 1 student with kidney/hypertensive disease, 1 with periventricular-leucomalacia, 1 visually impaired, and 1 with a shunt.
elementary	I have a student in a wheelchair paralyzed from the waist down who receives diaper changes and I monitor for skin breakdown.
elementary	1 RN is one-on-one with a student on a ventilator.
elementary	Preparing for field trips takes up a great deal of time.
elementary	Scoliosis, polymyositis, acid reflux, shunt, Hodgkin's lymphoma, latex allergy
elementary, junior high, high school	1 insulin pump
elementary, junior high, high school	Conditions include leukemia, bone tumor, spina bifida, cerebral palsy, migraine headaches, cold urticaria, paraplegia, cerebral palsy
high school	Although there is only 1 student with gastric tube feeding, she takes up 2 hours a day feeding. Also, due to the fact that she has Diastat ordered and a history of seizures, a nurse is required to ride the bus with her to and from school which takes up an additional 40-45 minutes daily.
high school	Working full time in a high school involves assessing students in the first aid room who may have been involved in accidents. High school nurses also are involved in a lot of emotional

	monitoring of students; they are involved with making sure that students follow through with appointments; they provide the counseling and nurturing needed for students to make the transition from high school into young adult citizens entering into the working real world. High school nurses' jobs never end because the students continue to seek the nurses' help long after the day is over.
high school	Optimum medication management is more difficult to implement at the high school level. Many students continue to self-medicate despite the sanctions placed on them by a school policy. Families argue that if a medication is safe enough to be sold over the counter the student should be allowed to use the medication free from scrutiny of the school nurse.
high school	In the high school population we see students who are using drugs in school, recovering addicts, Obsessive Compulsive Disorder, post-traumatic stress, pregnancy, Sexually Transmitted Diseases, anorexia/bulimia, bipolar disorder, suicidal, abuse, as well as rape/date rape
junior high	Have a student who is continual care; turn every 2 hours, tube-feed three times daily. Requires suctioning, but no trach. He has a full-time assistant with him.
junior high	Spina bifida, irritable bowel syndrome, hypoglycemia, ventriculoatrial shunts, congenital glaucoma, Ehlers Danlos syndrome
junior high	There is no way to note the time spent in health education with students or the time spent making referrals for care and connecting families to healthcare and insurance coverage.
junior high, high school	Down's Syndrome, Von Willebrand's disease, Fragile X Syndrome, congenital bilateral Perisylvian Syndrome, autism, Tourette's, severe gastroesophageal reflux disease (GERD), severe allergies
junior high, high school	High school students may have medical conditions that they do not report to the school such as asthma or ADHD.
pre-school, kindergarten, elementary, junior high, high school	We have 250 students with IQs of 50 or below. Concerns include skin and pressure problems resulting from being wheelchair-bound. Over 25% have seizure disorders.

STAFFING

TYPE OF SCHOOL	COMMENT
elementary	I am the school nurse for both the intermediate and the elementary school. I spend ½ day at each school and I am “on call” for the other ½ respectively.
elementary	LPN is stationed in a computer lab
elementary	RN at this location is functioning as an LPN aide
elementary	I have a full time health aide in the first aid room
elementary	The nurse at this school is a RN working as LPN.
elementary	We have a classroom teacher who also holds an active LPN license and serves as emergency backup. She is not paid for this. I have two parent volunteers, one LPN and one RN, who serve as substitutes. They receive only routine pay for their services and often volunteer.
elementary	Pool of 17 substitute nurses available for all schools.
elementary	CRNP is not employed by the Board of education; only cares for students with parental consent
elementary	The LPN at the school is a supplemental nurse; she is a Head Start aide but has nursing license
elementary	Superintendent is aware of a full-time nurse needed for the student using Solu-Cortef.
elementary, junior high	I am a CRNP, but the system does not pay me based on that certification.
elementary, junior high	LPN is also hired as an instructional assistant
elementary, junior high, high school	The RN revoked delegation of medication assistance [to unlicensed personnel] in September due to the fact that she cannot leave her school to monitor. She is responsible for 2 schools on the same campus that have glucagon orders on campus.
elementary, junior high, high school	Due to limitation in staffing and the lack of invasive here there is not nurse on a daily basis. I visit this school one day every other week.
elementary, junior high, high school	LPN at this school is paid by Special Education. She is there for emergencies but acts as a classroom aide. She is the person who performs the catheterizations for 1 student twice daily.
elementary, junior high, high school	I am the full time RN for the school system and we have one LPN who works 3 days a week; we have a Biology teacher who is a RN that covers the other 2 days.
high school	There is a medical prep instructor at the Tech School and she also serves as the school nurse. She will be over the medication delegation starting next school year.
high school	Full time RN working in LPN position
high school	Health Science Instructor is a licensed RN
junior high	A special education teacher is also a RN
junior high	The RN that is marked as volunteer is actually the librarian, who also holds a current license.
junior high	Our nurse position is an LPN position but we are fortunate enough to have an RN fill it at LPN pay
junior high, high school	I have 1 RN filling an LPN position in the health room and available for our student with glucagon. I also have 1 LPN one on one with our Tracheostomy student
pre-school	The full-time LPN school nurse for all students is also an instructional aide in the classroom.

Procedure

The survey was completed by 1449 public schools in the state of Alabama. The school listing was obtained from the State Department of Education. Registered nurses employed by the 132 reporting school systems were asked to complete the survey between February 20, 2006 and March 3, 2006, and submit the survey responses online via the Board's website, www.abn.state.al.us. A letter with instructions for completing the online survey was mailed to each school superintendent. Information was also sent to school nurses via electronic mail. Nurses who did not complete the survey by the designated timeframe were contacted by telephone to determine if clarification was needed on specific questions.

Findings

Statistical analysis of the data was performed using SPSS version 14. Calculation of descriptive statistics revealed that many Alabama school nurses completing the survey are present in his/her assigned school less than two days per week (mean=1.91, as shown in Table 3, Number of Nurses Completing Surveys and Health-Related Personnel). Most school nurses who completed the survey are assigned to more than one school. Average school enrollment was 507 (mean=507.65). The average number of nurses assigned to a specific school is one (mean=1.21). Most schools have three or four unlicensed personnel present who can be delegated the task of assisting with medications (mean=3.73), as noted in Table 1, School Nurse Data Collection Items.

Of the procedures listed on the survey, glucose testing was required most often (mean=1.15). Two frequently occurring physical conditions listed on the survey were Attention Deficit and Hyperactivity Disorder (mean=12.75) and asthma (mean=9.99). The injectable medication ordered most frequently was the Epi-pen or other injectable epinephrine devices (mean= 1.49). Finally, the types of prescribed medications most frequently administered in the school setting consisted of inhalers (mean=11.03) and inhaler medications (mean=15.48).

After calculation of descriptive statistics, in-depth analysis was performed in an attempt to determine the relationships between multiple variables. Initially, Pearson product-moment correlation coefficients were calculated in order to explore the relationship between the number of Licensed Practical Nurses assigned to specific schools as well as the number of Registered Nurses assigned and a variety of variables describing the type of personnel available, the physical condition of the student, physicians' orders utilized, injections utilized, and procedures performed in the school setting.

Because the assumptions for use of Pearson product-moment correlation coefficient were not met, the non-parametric technique of Spearman's Rank Order Correlation was utilized. The strongest correlation was with the variables of number

of LPNs assigned to a specific school and number of RNs assigned to a specific school: $r = -.365$, $p < .01$. This negative correlation demonstrated an association between increased numbers of LPNs in a school and decreased numbers of RNs. As the number of RNs hired for a specific school increases, the school system appears to consequently decrease the number of LPNs assigned to the same school. Furthermore, if the number of LPNs assigned to a school increases, the number of RNs assigned to the same school appears to consequently decrease.

Qualitative data was collected in the form of comments added by school nurses to the surveys prior to returning them to the Alabama Board of Nursing. These are presented in Table 2 and will be discussed in detail in a separate section of this report.

Summary of Findings

Findings of statistical analysis of the data yielded the following results:

- The one research question which was at least partially answered was:

What is the relationship between the number of Licensed Practical Nurses assigned to a specific school and the types of other health-related personnel available, including Registered Nurses, volunteer nurses, Certified Registered Nurse Practitioners, and substitute nurses? This was partially answered in terms of Registered Nurses.

- Calculation of descriptive statistics revealed the following:
 - many Alabama school nurses who completed the survey are present in each of his/her assigned schools less than two days per week (mean=1.91)
 - the average school enrollment was 507 (mean=507)
 - the average number of nurses assigned to a specific school is one (mean=1.21)
 - most schools have three or four unlicensed personnel present who can be delegated the task of assisting with medications (mean=3.73)
 - of the procedures listed on the survey, glucose testing was required most frequently (mean=1.15)
 - the two student medical conditions which occurred most frequently of the conditions listed on the survey were Attention Deficit and

Hyperactivity Disorder (mean=12.75) and asthma (mean=9.99); it is highly significant that nurses noted 63,266 children having conditions other than the ones listed on the survey

- the injectable medication ordered most frequently was the Epi-pen or other injectable epinephrine devices (mean= 1.49)
- the types of prescribed medications ordered most frequently consisted of inhalers (mean=11.03) and inhaler medications (mean=15.48)
- Use of Spearman's Rank Order Correlation shows a negative correlation existing between the number of Licensed Practical Nurses assigned to a school and the number of Registered Nurses assigned to a school. This would seem to indicate that as the number of Registered Nurses in a school increase, the number of Licensed Practical Nurses would consequently decrease.
- The areas where correlations might be expected did not occur. For example, data analysis did not support a significant correlation existing between total enrollment of students and the number of nurses assigned to a school, nor did there appear to be a significant correlation existing between the physical condition of the students, such as the ventilator dependence of five students, and the number of nurses assigned to a school. Furthermore, data analysis did not support a significant correlation existing between the number of unlicensed personnel providing assistance with medication and the number of nurses delegating this task to them.
- Comments provided by the school nurses completing the surveys yielded the following issues existing in the public school health care system in Alabama:
 - Increasing acuity of the physical conditions of students
 - RNs filling LPN positions and being paid at the lesser rate of pay
 - Inadequate numbers of substitute nurses
 - Psychological/emotional problems of high school students
 - Time required to provide health-related teaching to students

Limitations

The limitations of the research conducted primarily relate to validity and generalizability. Because no random sampling was utilized, poor external validity

exists. This means that although the survey instrument utilized appears to measure what it was intended to measure, results may not be generalizable to school nurse populations outside of the state of Alabama. The major design constraint that occurred when random sampling was not implemented may have contributed to the study's failure to answer nine of the ten proposed research questions. Another significant design constraint was the failure to consider a more varied listing of medical conditions for students. The fact that school nurses noted more than 63,000 students served by public school health services as having conditions other than those listed on the survey again points to the decreased external validity and generalizability of the study overall.

Implication of Findings

The negative correlation existing between the number of RNs assigned to a school and the number of LPNs assigned to a school would be expected to adversely affect the process of delegating authority to unlicensed personnel to assist with medication. The Alabama Administrative Code defines delegation as “the act of authorizing a competent individual to perform acts supportive to registered nurses or licensed practical nurses in selected situations” (Rule 610-X-2-.06 (2)). Although the task is delegated to an unlicensed person, the licensed nurse providing the delegation retains responsibility for the outcome of the delegated action. If an inadequate number of nurses are present in a school to provide appropriate oversight to unlicensed personnel, medication errors may result. The training manual for instruction of unlicensed personnel to assist with medications states that if the medication assistant notes that an incorrect dosage of medication has been given, the assistant should closely monitor the student, observing for physical and mental changes such as difficulty breathing, decreased level of alertness, dizziness, vomiting, and abdominal pain. The Registered School Nurse will be initially contacted by the medication assistant, followed by the school principal, Alabama Poison Control Center, and the student's parent or guardian and physician. An “Unusual Occurrence Report” will also be completed (Alabama State Department of Education, 2003). Since some schools are visited by nurses no more than one day every other week, the unlicensed person may be faced with the daunting task of contacting the Poison Control Center and the child's physician while attempting to describe symptoms.

The increasing acuity of the physical conditions of the students was remarkable. Nurses wrote in the comments section that they cared for students who were ventilator-dependent, as well as others who suffered from a multitude of conditions including various forms of pediatric cardiac conditions, cancer, autism, several different genetic syndromes, suicidal ideations, bipolar disorder, and many other problems. In addition to ventilators, nurses stated that they were required to care for tracheostomies, insulin pumps, central venous lines infusing chemotherapy, as well as gastric tube feedings. Every school nurse may not have the pediatric intensive care background which would be required to adequately care for a child

suffering from a cardiac condition requiring frequent monitoring of ECG patterns as well as pediatric doses of potent medications.

The correlations giving rise for concern are those which were expected to occur but did not come to fruition. There does not appear to be any consistent manner of assigning numbers of nurses to particular schools-there was no significant correlation existing between the total enrollment of students in a school and the number of nurses assigned, nor between the physical acuity of the conditions of the students and the number of nurses assigned.

In addition, the vast differences in the numbers of substitute nurses available were quite significant. They ranged from one county which reported one nurse available to act as substitute for the entire county to another county, which reported a pool of seventeen nurses available for any school in the county. The lack of available substitutes will place an undue burden on the few nurses who are available to supervise the unlicensed personnel receiving delegation instructions. Finally, a significant finding from the comments section was the nurses' use as a resource person to provide not only health-related teaching and emotional counseling to students and their family members but information on access to additional health care services, follow-up appointments when needed, and access to health insurance if possible.

Recommendations

When the findings of the analysis of the data and the implications of such findings are reviewed, several recommendations for future research or future actions emerge. One such recommendation can be based on a study conducted by the University of Iowa. A survey was completed by 649 nurses nationwide and specifically targeted the administration of medication in schools, including the policies and procedures for the dispensing of drugs to students, the types of medication being dispensed, and the personnel who are authorized to administer such medications. The study found that of the school nurses who reported errors in the administration of medications to students within the past year, almost eighty percent stated the type of error was a missed dose. Other errors were noted to be giving a double dose, giving medication without authorization, or giving the wrong medicine (Health in Schools, 2001). Therefore, this leads to the recommendation that the survey to be distributed to public school nurses by the Board during academic year 2006-2007 add questions regarding the number of medication errors and the primary type of error noted by the nurse to occur most often.

The acuity of the medical conditions noted by the school nurses generates another recommendation when it is observed that more than 63,00 children are found who have "other conditions" that do not fall within the range of the conditions listed on the survey. This would entail providing a more comprehensive listing of conditions when the survey questions are revised for the upcoming academic year. This recommendation is particularly important because it would increase the external

validity of the study and subsequently the generalizability of the findings to other populations of nurses. A stratified random sampling of Alabama's school nurses would further increase the generalizability of findings.

Another recommendation which emerges from the comments of the school nurses involves the increased number of students who have some type of either physical or mental disability and therefore have special needs. DePaepe (2002) noted that according to the 23rd Annual Report to Congress on the Implementation of Individuals with Disabilities Education Act (IDEA), there was a 351% increase in the number of students classified as eligible for special education services based on "Other Health Impairment" from the 1990-1991 academic year until the 1999-2000 academic year. Because of this increase, every school should have an emergency procedure developed which does not depend on the presence of a nurse, since some Alabama public schools do not have a nurse on-site at all times.

DePaepe further noted that students with health conditions that have been determined to adversely affect their educational performance may be found to be eligible for special education and related services under the Individuals with Disabilities Education Act (IDEA). School health services are identified within the individual health plan for students who are eligible under IDEA. Each individual health care plan should be developed for each child in collaboration with the school nurse, teachers, parents, pharmacist and primary health care provider. Components recommended for such a plan would include:

- the child's name, photograph, and emergency contact information
- persons responsible for implementation of treatment with qualifications specified
- diagnosis/description of the condition and health history, including specific symptoms and level of severity
- ongoing daily treatments including health care procedures and medication administration, to include the location of the medication, dosage, times for medication delivery, route of delivery, side effects, expiration date, and the school personnel responsible for treatment
- monitoring responsibilities, such as data/record forms
- emergency procedures, including specific symptoms that indicate an emergency and a sequenced list of actions to be taken in response to the emergency
- additional information such as the need for assistive technology or rest break when fatigued (2002).

It is recommended that it be verified that each nurse has adequate access to the medical information for each student that he or she provides with health services. The nurse must also must be an active participant in the formulation of these plans through the contribution of vital medical information which is gathered over the course of a school year. A question verifying the nurse's access to each student's individual health care plan will be asked on the survey for academic year 2007-2007.

Conclusion

Hootman (2003) emphasized that school nurses frequently become a student's primary contact for entry into the healthcare system when there is either a lack of health insurance or lack of access to medical services. The role of the school nurse has evolved into one that is multi-faceted, including direct care provider, case manager and consultant. School nurses will not be able to implement their roles unless they are provided with the personnel, resources, and networking tools necessary in order to provide students with the highest quality school-based health care available.

As public education continues its evolution from solely the provision of education into an entity that provides both education and health services, the school nurse will become an increasingly important part of the overall educational system. Lillian Wald's vision of public school health care has been eclipsed by the medical possibilities generated by the new technology of the twenty-first century. However, its focus remains unchanged: ensuring that the children served by the public school system receive health care which is of the highest quality possible.

Appendix A

School Nurse Data Collection Items (2005-2006)

- I. Name of nurse as listed on ABN license card _____
License number _____
Name of school system _____
Name of school _____
Grades served by this school _____
Total # students enrolled in this school _____
County _____
- II. Days per week that above nurse spends at this school _____
a. Every day/all day/5 days per week
b. 4 days per week
c. 3 days per week
d. 2 days per week
e. 1 day per week
f. Less than 1 day per week
- III. Number of licensed nurses (RN/LPN/CRNP) who delegated to unlicensed school personnel the task of assisting students with medications at this school _____
- IV. Number of unlicensed school personnel who have been delegated the task of assisting students with medications by a licensed nurse at this school _____
- V. Including yourself, if applicable, the total number of licensed nurses (RN/LPN/CRNP) assigned to this school as:
a. Full-time LPN school nurse for all students _____
b. Full-time RN school nurse for all students _____
c. Full-time RN or LPN working within one specific classroom of students _____
d. Full-time RN or LPN providing one-on-one care for one specific student _____
e. Full-time CRNP for all students _____
f. Health Career Teachers who are also nurses (RN or LPN) _____
g. Volunteer Nurses (RN/LPN/CRNP) _____
h. Substitute Nurses (RN/LPN/CRNP) _____
- VI. Number of students at this school requiring the following procedures:
a. Urinary catheterization, clean or sterile (self or assisted) _____
b. Tracheotomy care, including suctioning _____
c. Gastric tube feedings, insertion, or replacement _____
d. Glucose monitoring (finger sticks) _____
e. Ventilator care _____
f. Other (specify) _____
- VII. Number of students at this school with the following conditions:
a. Seizure disorder _____
b. Asthma _____
c. Diabetes (Type I or II) _____
d. Hemophilia _____
e. ADD/ADHD _____
f. Mental illness _____
g. Other (specify) _____

- VIII. Number of students at this school with orders for the following:
- a. Injectable medications
 - i. Insulin _____
 - ii. Glucagon _____
 - iii. Solu-Cortef _____
 - iv. Blood products _____
 - v. Epi-Pens or other injectable epinephrine _____
 - vi. Other (please specify type of injectable and number) _____
 - b. Rectal medication (e.g., Diastat) _____
 - c. To carry inhalers "on person" for self-administration _____
 - d. Oral medications
 - i. ADD/ADHD _____
 - ii. ANTIBIOTICS _____
 - iii. PSYCHIATRIC/MENTAL ILLNESS _____
 - iv. ASTHMA _____
 - v. SEIZURES _____
 - vi. OTHER (SPECIFY) _____
 - e. Breathing Treatments _____
 - f. Other (specify) _____

Appendix B: Reports Per Individual School Systems

AUTAUGA COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 13

No. of Students Enrolled in System: 8,943

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	2.85 (<3 whole days spent at 1 school)
Total No. of LPNs in School System	0
Total No. of RNs in School System	10
Total No. of Licensed Nurses Providing Delegation	11
Total No. of Licensed Nurses Assigned to a Specific Classroom	1
Total No. of Licensed Nurses Assigned to a Specific Student	0
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	2
Total No. of Volunteers who are also Licensed Nurses	1
Total No. of Substitute Licensed Nurses	0
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	47

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	19
Glucagon	16
SoluCortef	0
Blood Products	1
Epi-Pen or Injectable Epinephrine	29
Rectal Medications	4
Inhaler Medications	94
Inhalers	87
ADD Medications	46
Antibiotics	4
Psychiatric Medications	8
Asthma Medications	51
Seizure Medications	1
Breathing Treatments	7

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Urinary Catheterization or Assistance	4
Tracheostomy Care	2
Gastric Tube Care, Including Feeding	6
Glucose Testing	25
Ventilator Care	0

TOTAL NUMBER OF STUDENTS WITH THE FOLLOWING DISORDERS:

ADHD	74
Asthma	558
Diabetes	27
Mental Illness	4
Hemophilia	420
Seizure Disorder	37

BALDWIN COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 44

No. of Students Enrolled in System: 24,800

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	1.20 (< 2 whole days spent at 1 assigned school)
Total No. of LPNs in School System	15
Total No. of RNs in School System	23
Total No. of Licensed Nurses Providing Delegation	56
Total No. of Licensed Nurses Assigned to a Specific Classroom	10
Total No. of Licensed Nurses Assigned to a Specific Student	6
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	1
Total No. of Volunteers who are also Licensed Nurses	0
Total No. of Substitute Licensed Nurses	0
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	400

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	6
Glucagon	2
SoluCortef	0
Blood Products	0
Epi-Pen or Injectable Epinephrine	26
Rectal Medications	12
Inhaler Medications	81
Inhalers	44
ADD Medications	32
Antibiotics	0
Psychiatric Medications	6
Asthma Medications	23
Seizure Medications	9
Breathing Treatments	6

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES

Urinary Catheterization or Assistance	2
Tracheostomy Care	3
Gastric Tube Care, Including Feeding	13
Glucose Testing	40
Ventilator Care	1

TOTAL NUMBER OF STUDENTS WITH THE FOLLOWING DISORDERS:

ADHD	48
Asthma	181
Diabetes	11
Mental Illness	2
Hemophilia	188
Seizure Disorder	16

BARBOUR COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 4

No. of Students in System: 1,221

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	2
Total No. of LPNs in School System	2
Total No. of RNs in School System	4
Total No. of Licensed Nurses Providing Delegation	6
Total No. of Licensed Nurses Assigned to a Specific Classroom	0
Total No. of Licensed Nurses Assigned to a Specific Student	0
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	0
Total No. of Volunteers who are also Licensed Nurses	0
Total No. of Substitute Licensed Nurses	0
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	8

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	1
Glucagon	1
SoluCortef	0
Blood Products	0
Epi-Pen or Injectable Epinephrine	1
Rectal Medications	0
Inhaler Medications	19
Inhalers	17
ADD Medications	22
Antibiotics	0
Psychiatric Medications	0
Asthma Medications	8
Seizure Medications	1
Breathing Treatments	2

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Urinary Catheterization or Assistance	1
Tracheostomy Care	1
Gastric Tube Care, Including Feeding	1
Glucose Testing	1
Ventilator Care	0

TOTAL NUMBER OF STUDENTS WITH THE FOLLOWING DISORDERS:

ADHD	20
Asthma	19
Diabetes	2
Mental Illness	1
Hemophilia	3
Seizure Disorder	3

BIBB COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 10

No. of Students in System: 3,675

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	0 (< 1 whole day spent at 1 assigned school)
Total No. of LPNs in School System	2
Total No. of RNs in School System	1
Total No. of Licensed Nurses Providing Delegation	10
Total No. of Licensed Nurses Assigned to a Specific Classroom	3
Total No. of Licensed Nurses Assigned to a Specific Student	2
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	0
Total No. of Volunteers who are also Licensed Nurses	0
Total No. of Substitute Licensed Nurses	0
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	31

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	3
Glucagon	10
SoluCortef	0
Blood Products	0
Epi-Pen or Injectable Epinephrine	6
Rectal Medications	2
Inhaler Medications	149
Inhalers	121
ADD Medications	40
Antibiotics	4
Psychiatric Medications	1
Asthma Medications	0
Seizure Medications	0
Breathing Treatments	0

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Urinary Catheterization or Assistance	1
Tracheostomy Care	0
Gastric Tube Care, Including Feeding	0
Glucose Testing	10
Ventilator Care	0

TOTAL NUMBER OF STUDENTS WITH THE FOLLOWING DISORDERS:

ADHD	28
Asthma	171
Diabetes	12
Mental Illness	0
Hemophilia	79
Seizure Disorder	4

BLOUNT COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 14

No. of Students in System: 6,803

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	4.61 (< 5 whole days spent at 1 assigned school)
Total No. of LPNs in School System	2
Total No. of RNs in School System	11
Total No. of Licensed Nurses Providing Delegation	13
Total No. of Licensed Nurses Assigned to a Specific Classroom	1
Total No. of Licensed Nurses Assigned to a Specific Student	0
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	0
Total No. of Volunteers who are also Licensed Nurses	0
Total No. of Substitute Licensed Nurses	5
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	39

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	10
Glucagon	10
SoluCortef	0
Blood Products	0
Epi-Pen or Injectable Epinephrine	21
Rectal Medications	3
Inhaler Medications	110
Inhalers	140
ADD Medications	27
Antibiotics	0
Psychiatric Medications	2
Asthma Medications	24
Seizure Medications	2
Breathing Treatments	1

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Urinary Catheterization or Assistance	0
Tracheostomy Care	2
Gastric Tube Care, Including Feeding	1
Glucose Testing	22
Ventilator Care	0

TOTAL NUMBER OF STUDENTS WITH THE FOLLOWING DISORDERS:

ADHD	35
Asthma	322
Diabetes	14
Mental Illness	0
Hemophilia	164
Seizure Disorder	14

BULLOCK COUNTY SCHOOL SYSTEM REPORT

No. of Schools in System: 5

No. of Students in System: 2,490

NURSES:

Avg. No. of days Licensed Nurse Spends at assigned School per Week	2.8 (< 3 whole days spent at 1 assigned school)
Total No. of LPNs in School System	1
Total No. of RNs in School System	5
Total No. of Licensed Nurses Providing Delegation	5
Total No. of Licensed Nurses Assigned to a Specific Classroom	0
Total No. of Licensed Nurses Assigned to a Specific Student	1
Total No. of Certified Registered Nurse Practitioners	0
Total No. of Health Career Teachers who are also Licensed Nurses	0
Total No. of Volunteers who are also Licensed Nurses	0
Total No. of Substitute Licensed Nurses	1
Total No. of Unlicensed Personnel who can Receive Delegation from Licensed Nurse	8

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING MEDICATIONS:

Injectable Insulin	2
Glucagon	0
SoluCortef	0
Blood Products	0
Epi-Pen or Injectable Epinephrine	3
Rectal Medications	0
Inhaler Medications	25
Inhalers	10
ADD Medications	1
Antibiotics	0
Psychiatric Medications	0
Asthma Medications	4
Seizure Medications	0
Breathing Treatments	2

TOTAL NUMBER OF STUDENTS WITH ORDERS FOR THE FOLLOWING PROCEDURES:

Urinary Catheterization or Assistance	2
Tracheostomy Care	0
Gastric Tube Care, Including Feeding	1
Glucose Testing	1
Ventilator Care	0
